

# OsteoSelect PLUS<sup>®</sup>

Demineralized Bone Matrix Putty

Superior handling alternative  
to autologous bone grafting

# OsteoSelect PLUS<sup>®</sup>

## Demineralized Bone Matrix Putty

For surgeons looking for a DBM putty containing bone chips, OsteoSelect PLUS delivers with superior handling<sup>1</sup>. Combining demineralized cortical chips (1-4mm) with the proven formulation of OsteoSelect DBM putty, PLUS eliminates the need for cumbersome intra-operative mixing. Utilizing demineralized instead of mineralized cortical chips ensures that the additional graft material does not diminish osteoinductivity.

- Indications include use as a standalone bone graft in spinal procedures
- Equivalent to iliac crest autograft proven in a preclinical spinal fusion model<sup>2</sup>
- Assured osteoinductivity via validated processing
- Cohesive handling that resists irrigation due to robust biocompatible carrier
- Patient safety ensured through terminal sterilization and viral inactivation
